

“NO PLASTIC, NO STYROFOAM” POLICY

Cainta Catholic College adheres to the call to protect our environment and help prevent another “Ondoy”. To realize this, CCC students and employees will not bring or use any plastic and styrofoam containers inside the campus as well as in the canteen. Paper cups, too, will be encouraged for beverages.

Plastic and Styrofoam were found to have been the main culprit of floods. Discarded plastic bags have been found to be major contributors to the clogging of waterways. We believe that the most effective way of reducing the amount of plastic litter in the environment, especially here in Cainta, is to reduce our consumption.

As a school, we shall initiate the drive to address the problem of plastic bags. Change ultimately should come from everyone. Plastic bags and styrofoam materials are non-biodegradable. Plastic leaks into the food and drinks that we consume. Different types of chemicals get released into water from plastic and even more if you squeeze it. Furthermore, these cause negative effects on the liver and harms other internal organs with cancer-causing elements. For health and environment, this campaign will make one significant step toward protecting and preserving the beautiful world God has made.
